MSHA Block 1c Focused Acceptance Test

Final Targeted Corrections Before Block 2

Generated October 15, 2026 at 16:20

```
Model: Qwen/Qwen2.5-7B-Instruct
Prompt version: MSHA_BLOCK1C_FOCUSED_ACCEPTANCE_V3.0
Focused narratives tested: 180
Block 1a failures in focused sample: 55
Block 1c failures: 4
Block 1a failures recovered: 52
Block 1c success rate: 97.8%
Block 1c alignment rate: 76.1%
Block 1c critical-review rate: 48.3%

Overall focused acceptance:
REVIEW - at least one acceptance criterion was not met
```

Executive Summary

Block 1c is a focused acceptance test. It does not rerun the complete 1,000-record development sample.

The test evaluated 180 targeted narratives, including Block 1a validation failures and records assigned to struck-by, caught-between, loss-of-control, unexpected-equipment-movement, manual-handling, and no-separate-factor categories.

The revised cause hierarchy gives caught-between, vehicle, ground failure, stored-energy, loss-of-control, and unexpected-equipment movement priority over the broader struck-by category when their definitions are directly supported.

The prompt was shortened to reduce response-formatting failures. JSON repair now handles markdown fences, trailing commas, missing closing braces, aliases, missing fields, and minor Python-style constants.

Critical review flags now identify results that cannot safely enter the main statistical analysis without review. Advisory flags identify uncertainty or abstention that may still be appropriate.

Block 1a focused-sample success rate: 69.4%
Block 1c focused-sample success rate: 97.8%
Validation failures recovered: 52 of 55

At least one focused acceptance check requires review before the prompt is frozen for Block 2.

Focused Test Design

The test sample intentionally emphasizes the issues that remained after Block 1a. It is not designed to estimate the natural frequency of causes, factors, or prevention themes.

Targeted groups:

1. Block 1a response-validation failures.

2. STRUCK_BY_MOVING_OBJECT cases.

3. CAUGHT_IN_OR_BETWEEN cases.

4. LOSS_OF_CONTROL_OF_TOOL_OR_EQUIPMENT cases.

5. UNEXPECTED_EQUIPMENT_MOVEMENT cases.

6. MANUAL_HANDLING_OR_OVEREXERTION cases.

7. NO_SEPARATE_FACTOR_STATED cases.

8. Random control records used to bring the unique focused sample to approximately 180 records.

Overlapping targeted groups were deduplicated by SOURCE_RECORD_ID.

Focused Sample Selection

Target Group	Available Before Deduplication	Requested	Newly Selected
Block 1a validation failures	55	55	55
STRUCK_BY_MOVING_OBJECT	318	30	30
CAUGHT_IN_OR_BETWEEN	22	25	22
LOSS_OF_CONTROL_OF_TOOL_OR_E	65	25	25

Critical Review Reasons

Critical Review Reason	Count
Factor evidence is not supported by narrative	63
Factor-prevention combination is outside allowed map	39
Cause evidence is not supported by narrative	11
Cause is insufficient information	10
Model response failed validation	4
Record routed outside primary acute-accident population	2

Advisory Review Reasons

Advisory Review Reason	Count
At least one confidence value is low	110
At least one support level is low	108
No separate contributing factor stated	101
Allowed alternative prevention used instead of preferred mapping	11
Low support fallback output	4

Recovered Block 1a Validation Failures - 1 of 6

These narratives failed Block 1a response validation but produced schema-valid Block 1c outputs after prompt shortening and improved JSON repair.

==========
Example 1 | Record 220193090013 | Days away
Block 1a cause: INSUFFICIENT_INFORMATION
Block 1c cause: LOSS_OF_CONTROL_OF_TOOL_OR_EQUIPMENT
Block 1a factor: NO_SEPARATE_FACTOR_STATED
Block 1c factor: NO_SEPARATE_FACTOR_STATED
Block 1a prevention: INVESTIGATION_REQUIRED
Block 1c prevention: INVESTIGATION_REQUIRED
Block 1c status: SUCCESS
Critical review:
Advisory review: No separate contributing factor stated; At least one confidence value is low; At least one support level is low

Narrative:
Employee was pulling drip lines from the rail on the kabota and the lines got stuck which caused a sudden stop. It pulled EE's left shoulder back and immediately caused pain in the left shoulder. Was taken to clinic to be evaluated.

Block 1c cause evidence: Employee was pulling drip lines from the rail on the kabota and the lines got stuck which caused a sudden stop. It pulled EE's left shoulder back and immediately caused pain in the left shoulder.
Block 1c factor evidence:

==========
Example 2 | Record 220252530008 | No lost time or other
Block 1a cause: INSUFFICIENT_INFORMATION
Block 1c cause: HEAT_OR_ENVIRONMENTAL_EXPOSURE
Block 1a factor: NO_SEPARATE_FACTOR_STATED
Block 1c factor: ENVIRONMENTAL_CONDITION
Block 1a prevention: INVESTIGATION_REQUIRED
Block 1c prevention: CONTROL_ENVIRONMENTAL_EXPOSURE
Block 1c status: SUCCESS
Critical review: Factor evidence is not supported by narrative
Advisory review:

Narrative:
Employee felt lightheaded, moved to EE's service truck to cool down, drank electrolyte drink. Contacted EE's supervisor, told them EE felt off. was taken to break room where EE continued to hydrate and removed boots. decision was made by manager to transport EE to Hi Desert Medical Center where EE was treated for heat illness and released with no restrictions.

Block 1c cause evidence: Employee felt lightheaded and was treated for heat illness.
Block 1c factor evidence: The environment caused the heat illness.

==========
Example 3 | Record 220022000035 | No lost time or other

Recovered Block 1a Validation Failures - 2 of 6

Block 1a cause: INSUFFICIENT_INFORMATION

Emp was working with two other emp underground. Co-workers noticed that the employee was exhibiting
symptoms of heat related illness. The emp was removed from the work area and taken to ER for
precautions. The emp was treated for heat stress and received IV fluids. The employee returned to work
with no restrictions.

Block 1c cause evidence: The employee was working underground and exhibited symptoms of heat-related
illness, which led to heat stress and the need for medical treatment.
Block 1c factor evidence:

================================================================================
Example 12 | Record 220073020011 | Fatality
Block 1a cause: INSUFFICIENT_INFORMATION

Advisory review:

Narrative:
Employee was working on a crusher. A bucket tooth was wedged in the crusher. The crusher was jacked up. The jack kicked out and employee was struck in the head by an unknown object and knocked him into the bed of the truck where he struck his head on an unknown object. Employee received head trauma.

Block 1c cause evidence: The jack kicked out and an unknown object struck the employee in the head.
Block 1c factor evidence: The bucket tooth was wedged in the crusher and the jack was used to remove it, indicating the material was unstable and improperly positioned.

Critical review: Factor evidence is not supported by narrative; Factor-prevention combination is outside allowed map
Advisory review:

Narrative:
Employee was working on a crusher. A bucket tooth was wedged in the crusher. The crusher was jacked up. The jack kicked out and employee was struck in the head by an unknown object and knocked him into the bed of the truck where he struck his head on an unknown object. Employee received head trauma.

Block 1c cause evidence: The jack kicked out and an unknown object struck the employee in the head.
Block 1c factor evidence: The bucket tooth was wedged in the crusher and the jack was used to remove it, indicating the material was unstable and improperly positioned.

Block 1c Decision for Block 2

OVERALL RESULT: REVIEW REQUIRED

The focused test verifies the final corrections without rerunning the complete 1,000-record development sample.

The system is ready to freeze for Block 2 when:

1. Response and schema-valid rates meet the acceptance thresholds.

2. Most tested Block 1a failures are recovered.

3. The cause hierarchy functional tests distinguish caught-between, struck-by, loss-of-control, unexpected movement, and manual handling.

4. Factor-prevention alignment remains strong.

5. Cause evidence validity remains strong.

6. The remaining critical-review examples represent genuinely ambiguous or out-of-scope narratives rather than repeated prompt errors.

Advisory flags should not automatically exclude a result. For example, NO_SEPARATE_FACTOR_STATED may be the correct conservative response when the narrative explains what happened but not why.

Block 2 should use this Block 1c ontology, concise prompt, cause hierarchy, JSON repair, factor-prevention mapping, record routing, and critical-versus-advisory review structure without further tuning on the unseen Block 2 narratives.

Technical Appendix

```
Model: Qwen/Qwen2.5-7B-Instruct
